*Items listed are typically kept in our inventory. Please consult your physician or occupational therapist with any questions regarding these items. If we do not have an item on hand, or an item is requested that is not listed, we will consider purchasing the item for you as our budget allows. Please note that we will not purchase items that are disposable, e.g. toothbrushes for suction machines or BiPAP supplies.
2-Wheeled Walker

Standard walker with two wheels in the front and glide caps or “skis” on the back. The sides fold in for easy storage and transportation. Bariatric walkers will have dual wheels.

4-Wheeled Walker

Standard walker with 4 wheels, one on each leg. Also has seat which may or may not be padded, a padded backrest, and handles with brake controls. Brakes can be locked to hold walker in place. Accessories may include a basket or pouch located under the seat.

Manual Wheelchair/Transport Chair

Manual wheelchair has small wheels in the front and large wheels in the back for self propelling; transport chair has small wheels in front and back and is propelled by an attendant. Armrests and footrests may be height adjustable and/or swing away to allow easy transfer to and from chair. Chair can fold up for easy transportation and storage.
Electronically powered wheelchair. Features may include seat elevation, tilt, recline, powered elevating leg rests, joystick controller, Chairs can have either front, mid, or rear wheel drive.

Seat cushion most commonly used for manual and power wheelchairs. Some cushions are made of foam while other cushions (such as Roho, pictured on the left) feature several chambers that inflate by using a small handheld pump.

Mobility device for a person to have independence. Scooters come in 3-wheel and 4-wheel configurations powered by a rechargeable battery. Seat may be removable and handle mast folds down for easy transportation. Some features may include a swivel seat, height adjustable seat, height adjustable armrests, flip up armrests, basket, rearview mirror, horn, and headrest.
Bathroom Equipment

**Bath Lift**

Special lift that helps person to be lowered into and raised out of a bathtub. Most models collapse and fold for easy storage. Some feature a reclining back.

**Bedside Commode**

Toileting device that can be situated in various places for person’s convenience, most commonly bedside. Item comes with a lid, seat, splash guard, and bucket for easy removal. Legs are height adjustable. Most models can be positioned over a toilet if preferred.

**Grab Bar**

A grab bar is used as a safety handle for getting in and out of a tub or shower. The bar can either be suction based which attaches to the inside walls of the bath or it can be mounted (with screws) on the side of the tub.
**Bathroom Equipment**

**Power Toilet Aid**

A power toilet aid helps a person with limited leg strength rise from or lower to the toilet with a push of a button. The toilet seat is connected to the aid frame.

**Rolling Shower Commode**

Rolling chair for walk-in and/or accessible showers. It can also be positioned over a toilet, and may have a tilting feature.

**Raised Toilet Seat**

A raised toilet seat can be used to assist a person who has limited leg strength. The raised height can vary and help the person when sitting and standing up. Some units come with handles.
Bathroom Equipment

- **Shower Bench**: Stationary bench with no back that sits within the tub. Legs are height adjustable.
- **Shower Chair**: Stationary chair with back that sits within the tub. Legs are height adjustable.
- **Shampoo Tray**: A shampoo tray can be used to wash a person’s hair with ease. A hard plastic tray can be used while the person remains seated in their wheelchair with the tray overlapping a sink for easy water drainage. An inflatable tray can be used while the person is lying in bed.
- **Tub Transfer Bench**: Stationary chair with back that sits within the tub. Legs are height adjustable.
Bathroom Equipment

**Tub Slide Shower System**
Rolling chair attaches to a bridge that straddles tub wall and allows chair seat to slide across into tub. Chair can detach and be positioned over a toilet.

**Toilet Safety Frame**
A toilet safety frame is used to assist the person rising and lowering themselves on the toilet. The frame attaches to the toilet using the same hardware as the toilet seat. Frames feature padded armrests and are height adjustable.

**Tub Slider**
Stationary bench that straddles the tub wall and has a sliding seat that may or may not swivel. Legs are height adjustable.
Overlay

Placed on top of the mattress to provide alternating pressure relief. Requires a pump to alternate air flow.

Bed Cradle

A frame placed at the foot of a bed for application of heat or cold or for protecting injured parts from coming into contact with the bedding. They come in various sizes.

Bed Rail

Rail fits in between the mattress and box spring to assist person getting in and out of bed. Most units are height adjustable.

Over-the-Bed Table

A table to be used over a hospital bed. The bottom half can fit underneath a bed allowing the table top to extend over the bed. Table is also height adjustable. Some tabletops may tilt to one side (pictured middle) or swivel (pictured far right). Tables are set on either wheels or flat base.
Transfer Devices

Beasy Board

Uniquely shaped transfer board has a safe, comfortable disc that supports the user’s weight as it glides on the board’s track during transfer. Each disc rotates 360° to allow for easy placement and ease of transfer.

Sliding Board

A sliding, or “transfer,” board is used to transfer to and from one device to another, i.e. a wheelchair to a bed. Boards come in various lengths and may feature tapered ends. Some feature hand holes for ease of carrying.

Patient Lift

A patient lift and sling are used to safely transfer a person who has limited to no leg strength from a wheelchair, bed, or commode to another location. A standing lift can help a person be transported from a seated position to a standing position. Lifts can be either manually operated or power operated with a hand control.

Transfer Belt

A transfer belt is worn by a person who requires assistance during transfers and walking. A caregiver can hold onto the belt while assisting or stabilizing the person. Belts come in various lengths.
Pivot Disc

A disc with a rotating surface that allows a person to stand on it with the assistance of a caregiver and rotate, or “pivot”, enabling proper positioning from one piece of equipment to another.

Cane

Device to which helps stabilize walking. Some canes come with a quad base featuring four feet at the base of the cane. Some canes can also fold up for easy transport and storage.

Ramp

Ramps come in a couple configurations depending on the person’s needs. A folding “suitcase” ramp can be used for accessing steps in and out of a home. The rule of thumb in determining the length of a ramp is 1 ft of ramp length per 1 inch of step height. So a 6” step would require a 6ft. ramp. A threshold ramp is used for entering and exiting a doorway or over a small ridge.
